

There's a war on terrorism. We are addicted to fossil fuels.
2 billion people have no electricity or clean water.

What can every nation do to foster peace, sustainable development and solve the energy crisis?

The GENI strategy is to link the abundant renewable energy resources of our world with a global electric energy grid.
This is the highest priority of the World Game simulation.

The benefits are proven:

Elevated living standards.
Reduced hunger and poverty.
Stabilized population growth.
Reduced pollution from fossil fuels.
Increased trade, cooperation and peace.

*"There is no energy shortage,
there is no energy crisis,
only a crisis of ignorance."*
